Test cases explained

The following report summarizes the execution of the tests listed below:

🚀 Install & Launch

Screenshots of the app on various phones.
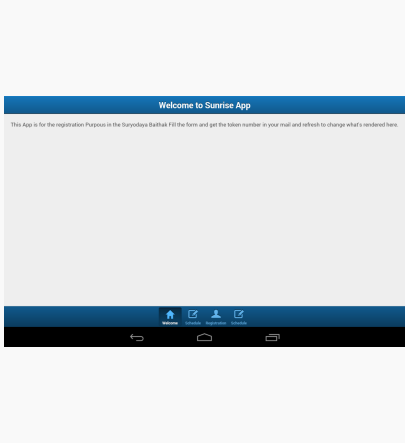

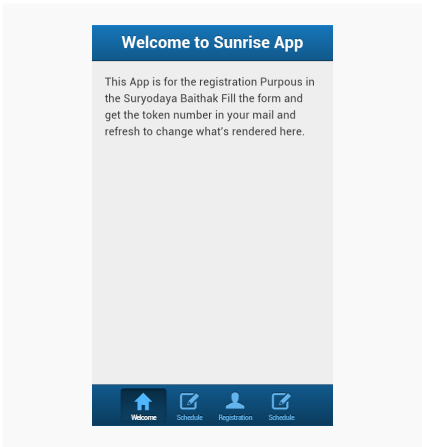

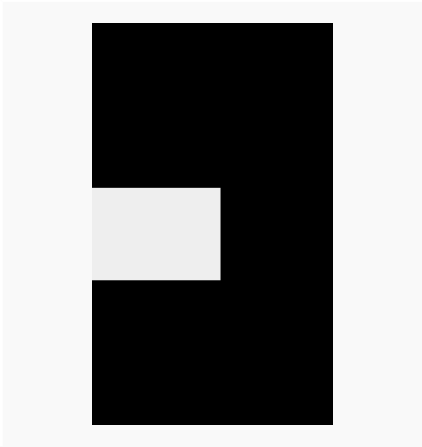

In the 'Install & Launch' test case, TestObject installs your application on all selected devices and takes a screenshot after installation.
Additional information will be displayed in case anything goes wrong.
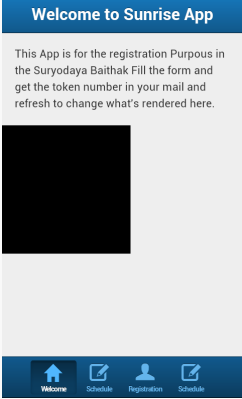

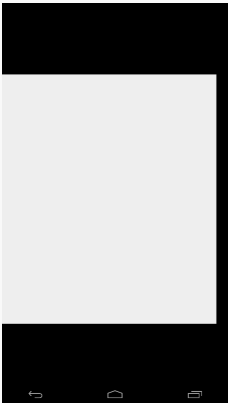

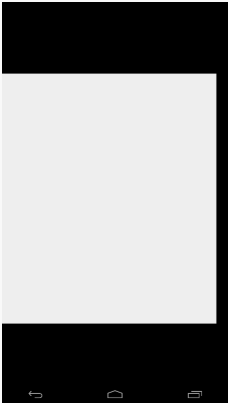

⩗ Stress Test
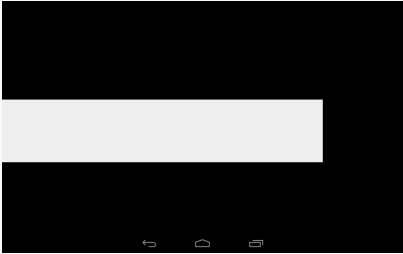

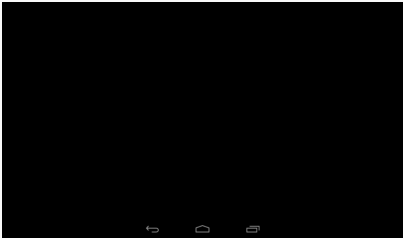

A series of random user input events to test the app under stress.
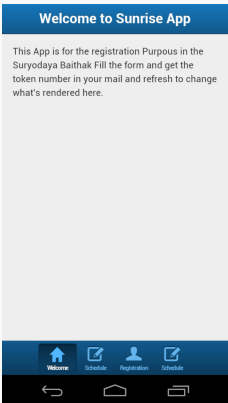

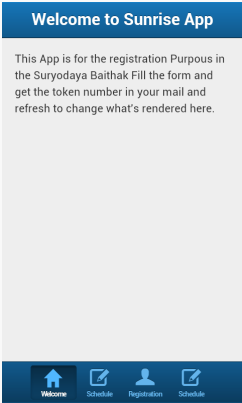

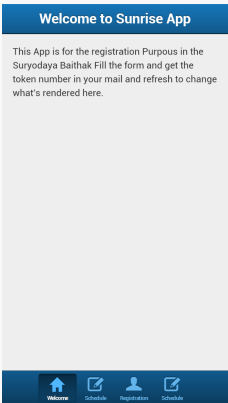

The 'Stress Test' test case automatically simulates thousands of user actions in your app.
TestObject uses the Google MonkeyExerciser to execute the random clicks within your app and provides information if an exception is thrown.
